

Wilson Natural Gut Tennis String

Produced for Wilson by the #1 name in tennis for natural gut.

Wilson Stamina Spin Tennis String

Textured surface for added spin, Tensilast outer wraps increase durability, extremely resilient with softer feel, excellent tension maintenance

Wilson NXT Tour Tennis String

Closest playing string to natural gut, #1 rated synthetic gut string for playability (USRSA), expands sweetspot by 15%, reduces vibration up to 80% vs. traditional synthetic gut, patented construction using Dupont Xycromicrofibers

Wilson Stamina Tennis String

Stamina was the most successful Wilson string launch ever. The heart of Stamina is the exclusive Tensilast material which increases durability without the "stiff" feel common to other durable strings

Wilson NXT MAX Tennis String

Closest playing string to natural gut, expands sweetspot by 12%, reduces vibration up to 74% vs. traditional synthetic gut, patented construction using Dupont Xycromicrofibers, up to 25% more durable than original NXT.

Wilson Extreme Synthetic Gut Tennis String

Description: Wilson Extreme Synthetic Gut is a basic single core/ single wrap string. This string is an exact copy of Prince Synthetic Gut. A good blend of playability, feel and control from a basic string

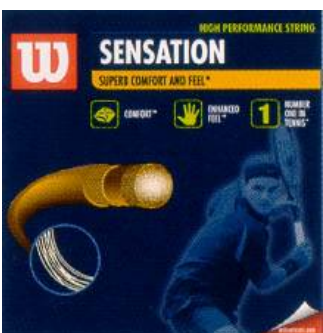

Wilson Enduro Mono String

Previously only available to competitive players, this European string is designed for hard hitting players who demand the utmost durability from their string. The polytetrafluoroethylene construction provides a softer, more forgiving feel when compared to traditional polyester monofilament strings.

Wilson Enduro Tour

A softer playing endurance polyester string with a blend of 28 polymers and additives. Enduro Tour's construction improves tension maintenance over traditional polyester strings. Previously only available to Wilson competition players. Offers more playability, but less durability compared to the 16 gauge version.

Wilson Sensation

Reduces vibration vs. traditional Synthetic Gut, excellent feel with added control, all around comfort and playability, the original high performance multifilament string.

Wilson HyperLast Spin

This ultra thin 19 gauge hybrid string opens up the stringbed for a more spin friendly hitting area and makes the stringbed slightly more lively. Main strings are Wilson's Technora synthetic gut textured with a Tensilast wrap for increased spin potential. Wilson's long lasting Stamina synthetic gut is used in the crosses. As well as producing some extra bite, Hyperlast Spin is also designed to be durable

Gamma Live Wire

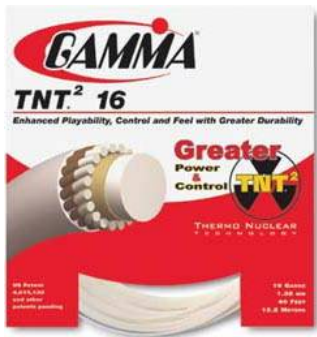

Monofibers are bundled in an Iso-Elastic array, where each fiber is designed to stretch at the same rate during impact to maximize the energy stored in the string, and subsequently, maximize the energy returned to the ball.

Iso-Elastic array of Live Wire monofibers surrounded by twisted Live Wire multifibers and monofibers with a durable soft pearl coating

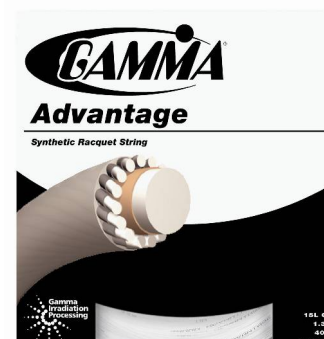

Gamma Challenger

An all-around string that offers a balance of playability and durability **for all playing levels and playing styles at a value price.** High tenacity copolymer center core and outerwraps with Nylon 6 coating

Gamma TNT 2 Tennis String

Gamma has reinvented the string that revolutionized tennis. Gamma TNT2 utilizes the new exclusive Elastilon 2 polymer and next generation TNT processing. What does this mean to you? A player will experience more power with less effort, better ball control and less arm damaging shock. And, Gamma TNT2 plays livelier longer! TNT2 Technology provides the greatest combination of power and control offered in a premium tennis string. This new second generation Thermo Nuclear Process allows for greater dynamic elasticity and string bed deflection to cushion the impact and store more energy in the strings.

Advantage

An extra durable synthetic string for hard hitters looking for longer string life.

Copolymer™ center core and outerwraps with Nylon 6 coating.

Prince Synthetic Gut

Description: Prince Original Synthetic Gut is the industry standard and delivers performance for players of all skill levels. An all-around performance string and offers a balance of playability and durability.

Gamma Synthetic Gut

An all-around performance string - balance of playability and durability for all playing levels and playing styles. Dynalonü center core and outerwraps with Nylon 6 coating.

Babolat Xcel Premium

A patented polyurethan multifilament. Xcel Premium provides maximum comfort with unmatched elasticity. Very good tension holding for better control. The first "clean" multifilament string without solvent in 4 gauges to go from power to resistance.

Gosen Arammix PRO

Aramid based with composite fiber technology which produces greater dynamic elasticity and greater dynamic resiliency, with excellent feel and control for hard hitters and string breakers. Specially developed resins allow the bonding of high modulus nylon and Kevlar fibers resulting in a new ultra-thin composite string technology. Co-polymer and E.T. coated (patented).

GOSEN OG SHEEP MICRO SUPER JC

Gosen's most popular synthetic gut, featuring a nice balance of resiliency and feel. A nice choice for all-court players looking for a compromise between the durability of cheaper synthetic brands and the softer feel of more expensive multifilaments.
